

英 問

英 語

令 和 5 年 度 (前 期)

注 意

1. 「解答はじめ」というまで開いてはいけない。
2. 問題は1冊(本文13ページ)、解答用紙は4枚である。
3. 全部の解答用紙に受験番号を書くこと。受験番号は次の要領で明確に記入すること。

(例) 受験番号 90001 番の場合 →

9	0	0	0	1
---	---	---	---	---

4. 解答は解答用紙の所定の位置に書くこと。他の所に書くと無効になることがある。解答用紙の裏面は使ってはならない。字数などの指示がある場合は、その指示に従って書くこと。解答文は横書きとする。
5. 書き損じても、代わりの用紙は交付しない。
6. 試験終了後、問題冊子は持ち帰ること。

I 次の英文を読み、下の問いに答えなさい。（*を付した語句には、問題文の末尾に注がある。）

Meat is essential, or so some of us think: that humans have always eaten it; that it is the anchor of a meal, the central dish around which other foods revolve. But the United Nations Food and Agriculture Organization reports that the consumption of beef per person worldwide has declined for fifteen years. Nearly a fourth of Americans claimed to have eaten less meat in 2019, according to a Gallup poll*. The recipe site Epicurious, which reaches an audience of 10 million, provides far less beef recipes in 2020. Diners at some McDonald's restaurants can now have a vegan* McPlant instead of a cheeseburger. Fake meat products are estimated to reach \$85 billion in sales by 2030, according to a recent study, and Tyson Foods, one of the biggest beef packers* in the United States, has introduced its own plant-based line of products.

Even some of the world's most expensive restaurants, where steak is usually served as the conclusion of a multiple-course meal, have abandoned meat within the past year, including the \$440-per-person Geranium in Copenhagen (still serving seafood) and the \$335-per-person Eleven Madison Park in Manhattan. Could this be the beginning of the end of meat — or at least red meat?

Those who believe humans are born carnivores* might laugh. Indeed, archaeological* evidence shows that we have been carnivores for longer than we have been (A) human. As the science journalist Marta Zaraska explains, two million years ago, early hominids* in the African savanna were (B) eating whatever animals they could catch, from wild pigs and hedgehogs to giraffes and rhinos.

Yet it wasn't (C) human nature to do so. Meat-eating was an adaptation, since, as Zaraska points out, we lack the great yawning jaws and blade-like teeth that enable true carnivores to kill with a bite and then tear raw flesh straight off the bone. To get at that flesh, we had to learn to make

weapons and tools, which required using our brains. These in turn grew, a development that some scientists attribute to the intake of calories from animal protein, suggesting that we are who we are — the intelligent humans of today — because we eat meat. But others credit the discovery of fire and the introduction of cooking, which made it easier and quicker for us to digest meat and plants alike, freeing up energy to fuel a bigger brain.

Whatever the cause of our heightened mental abilities, we continued eating meat and getting smarter, better with tools and better able to keep ourselves alive. Then, around 12,000 years ago, our hunter-gatherer ancestors started to⁽¹⁾raise animals, grow crops and build permanent settlements, or else were driven out by humans who did. Our diet changed.

Far from being essential, for most people around the world, meat has been only occasional, even incidental, to the way we eat. This was true outside of the West well into the 20th century, but even in Europe before the 19th century, the average person depended on grains that made up close to 80 percent of the diet. The Old English “mete” was just a general word for food.

The rich were different, of course, with the resources to dine as they pleased. And not just royals and aristocrats: In 18th-century England, as incomes rose, an ambitious middle class began to claim some of the same privileges as their supposed social superiors. The Finnish naturalist Pehr Kalm, in a 1748 account of a visit to London, reports, “I do not believe that any Englishman who is his own master has ever eaten a dinner without meat.” Those⁽²⁾not so fortunate as to control their own lives had to make do, as the British poor had done for centuries, with mostly oatmeal, perhaps with some vegetables. So meat was not merely a food — it was a symbol. To eat it was to announce one’s mastery of the world.

No wonder, then, that the citizens of a newborn nation, one that imagined itself fashioned on freedom and the rejection of the Old World, should embrace it. “Americans would become the world’s great meat-eaters,” the former

Librarian of Congress Daniel J. Boorstin writes in *The Americans: The Democratic Experience*. And the meat that would come to define Americans was beef: a fat piece, dark-striped from the grill but still red at the heart, bleeding and leaking life.

However, cows are not native to the Americas. The Spanish brought the first cows to the New World in the late 15th century. They were used to turn the sugar mills in what was then the West Indies, on plantations that relied on enslaved people for labor. Later, in both North and South America, the spread of cattle herds became a means of grabbing land from its original inhabitants. “By occupying the vast spaces between population centers, cattle helped secure colonial control of more and more territory,” writes Rosa E. Ficek, a cultural anthropologist at the University of Puerto Rico. The beef Americans eat is the⁽³⁾beef of empire.

For some, that image of conquest is, arguably, what makes beef so difficult to give up. The so-called “tomahawk steak”, named after the ax wielded by some North American Native peoples, is big enough to feed two. But its tomahawk-like shape may also make some Americans nostalgic for the often lawless and sometimes violent Old West. In the decades after the Civil War, a romanticized vision of the cowboy was advertised as the embodiment of American values: a vaguely rebellious figure, quick with a gun, and a rough individualist, driving cattle across the plains while hunters and settlers killed the native bison* that once (D) there, and driving out Native peoples along the way. Beef is the myth of the American frontier.

It was also the foundation of enormous wealth, and it wasn't the cowboys who got rich. “It is difficult to turn a living thing into a meal,” notes the American business historian Roger Horowitz. “Animals’ bodies resist becoming an expression of our will.” The profit (E) in running the meatpacking factories, which were among the first pioneers of the industrial assembly line, and in the railroads, which carried live animals, and then, with the development

of refrigerated cars, in the freshly butchered meat that would eventually reach every corner of the country.

It's impossible to talk about beef without talking about capitalism: Cattle were one of the earliest forms of private property, and in England starting in the 12th century, the need for more grassland (F) to privatization of what had once been common lands, and peasants with no land of their own had to sweat and slave for wages. Today, the mean hourly wage of an American meat worker is \$15, just over the poverty level to support a family of four, although (G) serious injuries such as amputations*, head wounds and severe burns. In the United States, meatpacking factories average about seventeen major incidents each month requiring hospitalization and two amputations a week, according to data from the Occupational Safety and Health Administration.

The American activist Carol J. Adams has written of the morality of transforming “living beings into objects.” She is referring to animals and their hidden deaths; the workers, and their suffering, are invisible, too. The meat comes to the table, a mass of flesh, carefully stripped of any sign of what it was before.

Americans eat less beef than they used to, down more than a third from a peak of 42.7 kilograms per person in 1976. This is part of an overall trend of eating less meat in the United States, and most respondents to the 2019 Gallup poll said they did so for health reasons—as opposed to animal welfare or the damage to the environment from gigatons of greenhouse gases released by cows, or the 111 million acres of forest that disappeared between 2001 and 2015, replaced by grassland—which suggests that self-interest, rather than compassion, is still the main motive for people to change their behavior.

The idea that not eating meat is a (H) (and possibly un-American) persists in the technological race to create non-meat alternatives. The Israeli-based company Redefine Meat, founded in 2018, sells steaks 3-D printed from vegan ingredients. It takes pains to insist on its website, “We don’t just

love meat; we're obsessed with it,” and promises “the same great meat you know and love, simply better.” Burger King has introduced a plant-based version of the Whopper, their number-one seller, featuring “Impossible Burger” patties that bleed when cut.

Impossible Burger patties contain heme, a protein present in animal flesh but here derived from plants. Heme adds flavor, but it's the texture that really matters, spilling under the teeth like real blood. Unlike the fake meat cooked for centuries in China — lotus root* standing in for pork ribs, and crispy layers of tofu skin* for duck skin — these fakes aim to provide not just the taste and feeling but the cultural importance of the real thing.

It's as if the only way to get people to stop eating beef is to trick them into thinking they're still eating it. Nothing has been lost, no sacrifice required. We can save the planet from those greenhouse gases without giving up the pleasure of sinking our teeth into what at least feels like animal flesh, rich with fat, full of juices. This is how deep it goes,⁽⁴⁾ the myth of settlement and conquest, with the trickle of blood on the plate to reassure us that our own runs red.

注 Gallup poll 米国の統計学者 G. H. Gallup が始めた世論調査

1 下線部(1)を和訳しなさい。

2 下線部(2)を和訳しなさい。

3 下線部(3)のように言えるのはなぜか、本文の内容に即して 80 字以内の日本語(句読点を含む)で説明しなさい。

4 下線部(4)が表す内容を 30 字以内の日本語(句読点を含む)で説明しなさい。

5 空欄(A), (B), (C)に入れる語の組み合わせとして最も適切なものを、下の選択肢イ～ニから選び、その記号を解答欄に書きなさい。

(A) (B) (C)

イ closely — occasionally — significantly

ロ fully — regularly — necessarily

ハ generally — skillfully — rarely

ニ particularly — barely — essentially

6 空欄(D), (E), (F)に入れる動詞として最も適切なものを以下の中から選びそれぞれ正しい形に直して、解答欄に書きなさい。ただし、各動詞は 1 回のみ使用できるものとする。

break

feed

lead

lie

7 空欄(G)に入れるものとして、以下の語を最も適切な順に並べ替えたとき、3 番目と 8 番目に来るものをそれぞれ解答欄に書きなさい。

are

likely

meatpackers

more

others

suffer

than

three

times

to

8 空欄(H)に入れる語として、最も適切な英語 1 語を本文中から抜き出し、解答欄に書きなさい。

9 人類の知力が発達した理由について、本文中に示された二つの説をそれぞれ 60 字以内の日本語(句読点を含む)で述べなさい。

10 以下の選択肢イ～ホのうち本文の内容と一致するものを一つ選び、その記号を解答欄に書きなさい。

イ Americans now eat more vegetables as part of a sustainable lifestyle.

ロ Cowboys who conquered the new frontier were the first capitalists.

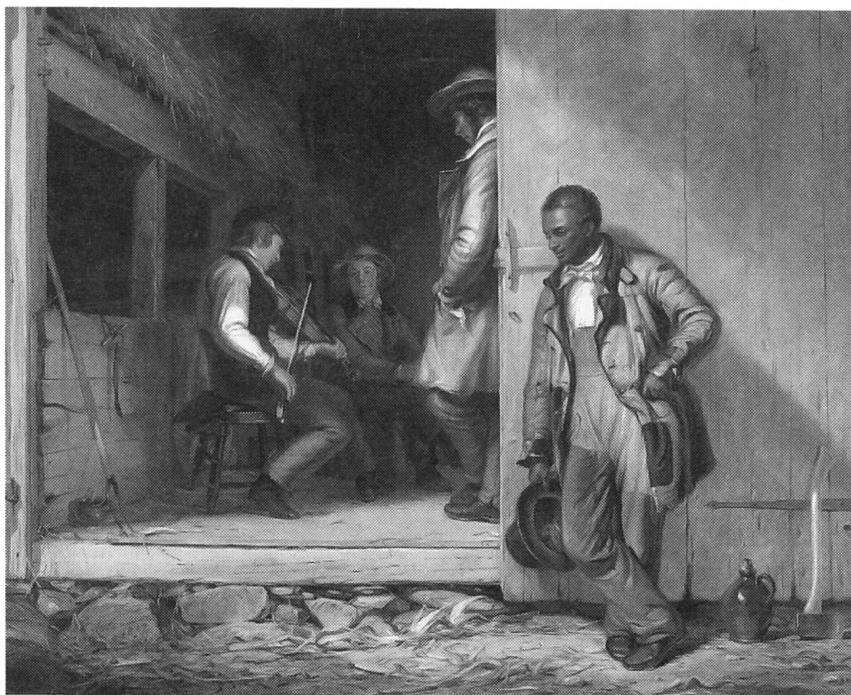

ハ Cows have such a strong will that their flesh is hard to process.

ニ Fake meat is favored by people who cannot afford the real thing.

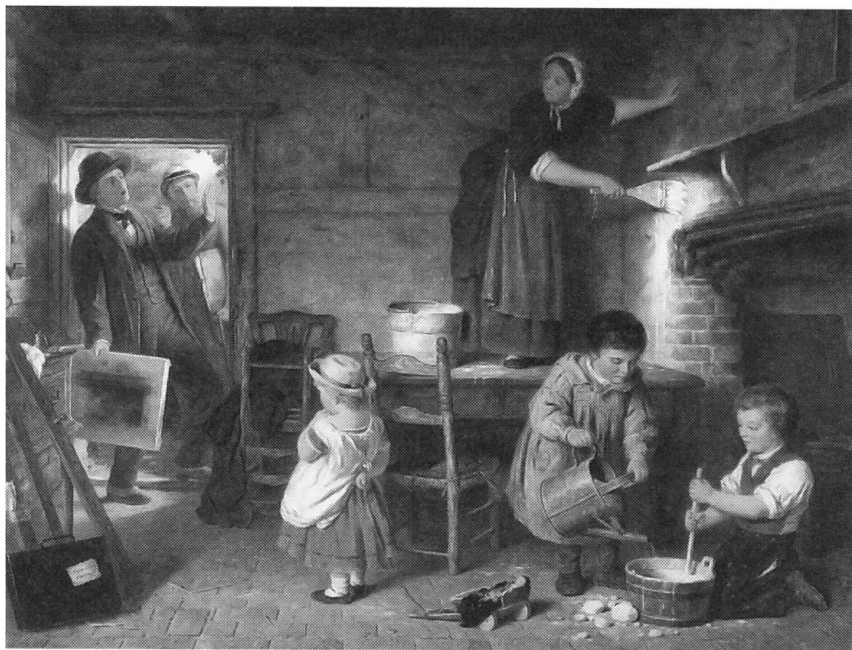

ホ The word “meat” didn’t originally refer to animal flesh.

II Choose one of the pictures below and describe it in English. Your description should be 100 to 140 words in length. Indicate the number of the picture you have chosen. *Correctly* indicate the number of words you have written at the end of the composition.

(1)

(2)

(3)

Ⅲ 音声を聞き、その指示に従って、AおよびBの各問いに答えなさい。

A 下の1～6の空欄に入れるのに最も適切なものを選択肢イ～ニからそれぞれ一つ選び、その記号を解答用紙に書きなさい。

1 The Marshmallow Test is a test that examines _____.

- イ children's blood sugar levels after having snacks
- ロ children's mathematical performance
- ハ how long a child can wait for rewards
- ニ whether a child has the ability to find a shortcut

2 The people who succeed in life _____.

- イ are capable of putting off pleasure
- ロ are eager to see results right away
- ハ are keen to know how to save money
- ニ take whatever shortcut they can find

3 Accepting the delay of satisfaction _____.

- イ demonstrates higher intelligence
- ロ gives an immediate reward
- ハ prevents predicting the future
- ニ works towards a shortcut

4 The concept of tomorrow is something that _____.

- イ animals can be taught
- ロ both humans and animals share
- ハ humans are aware of
- ニ neither humans nor animals understand

5 According to the example in the talk, students who delay doing homework

_____.

- イ are mapping the future
- ロ can completely relax
- ハ enjoy their holiday more
- ニ want an instant reward

6 According to the speaker, intelligent people _____.

- イ map the future and take shortcuts
- ロ plan ahead and postpone satisfaction
- ハ take quick payoffs and delay satisfaction
- ニ take shortcuts and get quick payoffs

B 下の1～6の空欄に入れるのに最も適切なものを選択肢イ～ニからそれぞれ一つ選び、その記号を解答用紙に書きなさい。

1 Popular songs repeat _____.

- イ as composers criticize them very often
- ロ based on psychologists' suggestions
- ハ because people don't like listening to the radio
- ニ regardless of the culture they are from

2 The “mere-exposure effect” _____.

- イ causes people to be bothered by songs on the radio
- ロ causes people to prefer things they have encountered before
- ハ does not make people appreciate repetition
- ニ does not make people dance or sing

3 In the psychological experiment, _____.

- イ both versions of the music had different composers
- ロ both versions of the music were repetitive
- ハ people thought famous composers wrote the repetitive music
- ニ people thought the music came from several different centuries

4 People might start humming out loud _____.

- イ as several aspects of repetition are mentioned
- ロ because the mind can predict what comes next
- ハ before they start listening to the next song
- ニ until they listen to the part that repeats

5 Sometimes listeners participate in repetitive music _____.

イ because they are not knowledgeable

□ because they listen to it passively

ハ by recognizing its childish features

ニ by singing out loud unconsciously

6 The study at the University of Southern California _____.

イ could not consider more than 2,400 songs

□ did not find any relationship between popularity and repetition

ハ discovered that the most popular songs repeated the most

ニ ranked the most popular songs over fifty years
